

MCBRIDE

McBride, Inc. in San Diego, California is the nation's leading specialized electrical and information transport (voice, data, video) contractor. With a proud heritage since 1950, McBride serves more than 40% of the Fortune 100 through a unique combination of 14 regional branch offices and their best-of-breed associate partners. Their commercial and industrial clients depend on them daily, to plan, implement, protect and conserve the infrastructure which is vital to their business - in every state of the nation.

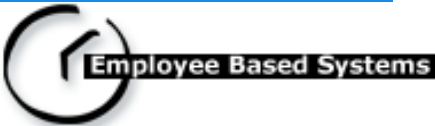

Challenge

McBride had a customized ERP program which was used to collect employee worked hours performed calculations based on the state of California's rules for overtime. These hours were then exported via a CSV file format to Sage Abra. The main drawback of this program was that it did not perform any payroll functions or customization data mapping inside Sage Abra, one of which was employee garnishments. This meant of course that these calculations had to be done manually. The manual process of calculating employee garnishments was an unnecessary and time-consuming procedure. They also had a problem in finding out discrepancies in employee quarterly payroll tax verifications.

To find a solution to all these payroll issues, McBride approached their Sage Abra consultant, who advised them that **Employee Based Systems** had developed a number of products which would be the key to solving all these payroll issues.

Solution

The use of **EZ-Time Import** product helped to customize data mapping inside Sage Abra. The added functionality of the program is its ability to check and verify all information that is entered into Sage Abra, before data is posted to Sage Abra for Payroll. McBride also implemented the **EZ-GARN** application from EBS, which helped with its automatic calculation of employee garnishments, thus saving valuable time and increasing efficiency. The **EZ-Wage and Tax** application enabled the detection of various errors that occurred during employee quarterly tax calculations. Most of these errors could easily be rectified with the EZ-Garn application before posting to payroll.

MCBRIDE

Industry

Nation's leading specialized electrical and information transport (voice, data, video) contractor

Challenge

The manual process of calculating employee garnishments was an unnecessary and time-consuming procedure. They also had a problem in finding out discrepancies in employee quarterly payroll tax verifications.

Products in Use

Payroll Optimization:
EZ-Wage and Tax
EZ-GARN
EZ-Time Import
EZ-ACH(Header)

"EBS is a top notch organization. All the people we worked with on this project were courteous, knowledgeable and helpful. The EZ-Time Import program has stream-lined the entire payroll process and efficiency has increased up to five fold".

-- David Fischer, IT Director

Service and Support

The Technical support and services from EBS is very good. The implementation of all products was done by either reading the product related user manuals or by direct support from EBS Technical Staff.
